COLD CHAIN COMPLIANCE
EXPERT

Market Challenges

Key Issues in Cold Chain Compliance and Market Growth Potential

Temperature excursions lead to product spoilage and compliance failures, causing significant financial losses. The UAE cold-chain logistics market is projected to grow substantially, driven by regulatory requirements for temperature monitoring of high-risk foods. There is a critical need for a streamlined solution amidst a skilled labor shortage, making current compliance methods unsustainable.

Beachhead Strategy

Targeting Food Segment Before Expanding to Pharmaceuticals

The food sector presents an ideal starting point for ColdProof, with **rapid buying decisions** and a moderate willingness to pay. By establishing credibility and references in this segment, we can effectively transition to the pharmaceutical market, where the stakes and values are significantly higher, but the sales cycle is longer.

Go-to-Market Strategy

Strategic phases to effectively penetrate the cold chain market landscape

Our go-to-market strategy consists of three phases: Land, Expand, and Scale. Starting with direct B2B engagement in operational facilities, we will establish proof points to build credibility. As we expand, we will leverage natural growth paths through per-point pricing, ultimately scaling through partnerships and broader market engagement.

De-Risking Insights

Understanding market validation and unproven assumptions for strategic growth

To ensure our success, we need to validate the **real market demand** and the willingness to pay within the food segment. While the regulations and documented food loss problems indicate a strong need, understanding the sales cycle velocity will be crucial before scaling operations and exploring additional channels.
